LAKSHMIPRIYA RAJESHKANNA

DevOps Engineer | Cloud Infrastructure | Kubernetes | CI/CD | Infrastructure Automation
267-261-2987 | rs.lakshmipriya08@gmail.com | LinkedIn | GitHub | Open to relocation

SUMMARY

- Platform and DevOps Engineer with 2+ years in software and infrastructure engineering across AWS, Azure, and VMware, building internal platforms in Go and automating Kubernetes/EKS deployments using ArgoCD and Terraform
- Automated operations across 453+ Windows servers and 169+ customer applications, reducing VM provisioning time from 7 days to ~14 minutes and AWS costs by 35%

EXPERIENCE

AssetWorks | DevOps Engineer — May 2026 – Oct 2026

Hosted Environment Navigator v2 *(Go, Gin, HTMX, Asynq, Redis, SSE, PostgreSQL, WinRM, Ansible)*

- Architected and led the ground-up rebuild of an internal operations platform (57k lines, 408 routes, 12 Celery tasks) from Python/Flask to a Go/Gin, HTMX, Asynq, and PostgreSQL stack, closing security gaps and eliminating lost-on-restart jobs; splitting FA-EAM and M5 into independent products over a thin shared platform with CI-enforced layer boundaries
- Built the SRE foundation (default-deny RBAC, CSRF on every write, durable audit-logged jobs, live SSE progress, SLOs of p95 < 300 ms and alerts < 2 min) with v1 running alongside v2 under golden contract tests for zero-downtime cutover

Self-Service VM Provisioning (Ansible, ManageIQ, Azure DevOps, VMware ESXi)

- Built an end-to-end self-service Windows VM provisioning platform automating capacity-based ESXi placement, IP/DNS allocation, and approval-gated Azure DevOps pipelines, cutting provisioning time from 7 days to ~20 minutes
- Enabled same-day customer onboarding and on-demand built/test VMs for CI/CD pipelines, removing the ticket-and-wait cycle and reducing manual infrastructure effort and built 15+ VMs with this self-service

Automation *(Python, Celery, OpenShift, Azure DevOps, Playwright, Bicep)*

- Extended the Navigator with Celery fan-out/fan-in checks to monitor 300+ configuration files across 30+ servers at 15-minute intervals, with shared and customer-specific dashboards, eliminating manual configuration audits
- Automated post-maintenance health and database connectivity checks for 169+ customer applications using Azure DevOps, Playwright, and Key Vault, plus a self-service onboarding pipeline that generates customer-specific YAML and test workflows, replacing manual pipeline creation
- Automated production IP whitelisting with Azure NSG and Bicep behind IT-approved pull requests; validated db replication across 6-7 test phases

Epilogue Systems | DevOps Engineer — Sep 2025 - Mar 2026

Kubernetes Deployments *(EKS, ArgoCD, NGINX Ingress, AWS ALB, HPA)*

- Containerized services and deployed them on EKS (Ubuntu Linux) with NGINX Ingress and AWS ALB; cut Docker image size 35% and, with HPA autoscaling, improving scaling response time by 40%
- Built 5–6 product CI/CD pipelines that delivered 20+ Kubernetes version updates; implemented ArgoCD GitOps with rolling updates and self-healing sync, supporting 10+ automated deployments daily at 99.9% uptime

Infrastructure as Code & Security *(Terraform, IAM, Trivy)*

- Provisioned private-subnet AWS infrastructure (VPC, EKS, RDS) with Terraform and least-privilege IAM, and added Trivy scans as a CI security gate that cut vulnerabilities by 90%

Automation & Monitoring *(Airflow, Graylog, Grafana)*

- Built an Apache Airflow ETL and Graylog/Grafana log pipeline processing 8-9M logs/day, with anomaly detection and Slack/email alerts naming the error, time, and owner, cutting production downtime 45%

AWS Cost Optimization *(CloudWatch)*

- Audited redundant CloudWatch log ingestion and unused metrics, cutting AWS costs 35% ($7,000 to $4,500/month, about $30,000 saved per year)

Techavidity | Software Engineer Intern — May 2025 - Aug 2025

CI & Testing Automation

- Developed CI/CD pipelines with automated tests and security gates in the CI stage, reducing deployment time by 40%

Containerized Application Deployment *(Docker, Kubernetes)*

- Deployed and managed 10+ containerized applications using Docker and Kubernetes on AWS EKS, implementing rolling updates and health checks to achieve 99.95% application availability

Intellint Technology LLP | Full Stack Developer — Apr 2022 - Apr 2023

Shipment Portal CI/CD *(Docker, AWS)*

- Developed a shipment portal for 50+ daily users with Docker CI/CD on AWS, cutting manual work 30% and deployment failures 25%

TECHNICAL SKILLS

Cloud: AWS (EKS, EC2, S3, RDS, IAM, VPC, CloudWatch), Azure, VMware
Containers & GitOps: Kubernetes, Docker, ArgoCD, NGINX Ingress, Helm
IaC & Automation: Terraform, Ansible, Bicep, ManageIQ, OpenShift
CI/CD & Security: Azure DevOps, GitHub Actions, Jenkins, Git, Trivy, Azure Key Vault
Languages & Observability: Python, Bash, PowerShell, Grafana, Prometheus, Graylog; Linux (Ubuntu), Windows Server

EDUCATION

Drexel University – M.S., Software Engineering, Philadelphia, PA — Sep 2023 - Mar 2025
Sona College of Technology – B.Tech, Information Technology, Salem, India — Sep 2018 - Jun 2022
