LAKSHMIPRIYA RAJESHKANNA

DevOps Engineer | Cloud & Infrastructure Automation | CI/CD | Kubernetes

Philadelphia, PA (Open to Relocation) | 267-261-2987 | rs.lakshmipriya08@gmail.com | LinkedIn | GitHub

SUMMARY

DevOps Engineer with an M.S. in Software Engineering and ~2 years of experience across Azure, AWS, Kubernetes, and CI/CD. Built automation for a hosted SaaS platform spanning 453+ Windows servers and 169+ customers, zero-touch VM provisioning, config drift detection. Cut AWS spend 35% and production downtime 45%. Strong in Terraform, Ansible, Kubernetes, ArgoCD, and Prometheus/Grafana.

EXPERIENCE

AssetWorks | *DevOps Engineer* **May 2026 - Present**

- **Self-Service VM Provisioning (Ansible, ManageIQ, vSphere, Windows, ESXi):** Manual, multi-day VM provisioning across a Windows Server fleet was a major bottleneck; built a zero-touch workflow automating 7+ steps, ESXi host hypervisor placement, IP/DNS allocation, Windows VM config, and environment setup. ***Cut provisioning time from 7 days to ~14 minutes (99.86% faster) across 15+ VMs built***
- **Hosted Environment Navigator (Python, Flask, PostgreSQL, Redis, Celery, WinRM, Ansible, NGINX, Windows):** Worked with my team lead on an internal platform providing centralized connectivity and operational visibility across 453+ windows servers supporting FA-EAM and M5. Took ownership of new M5 product workflows and worked on integrating with the backend connectivity layer, including provisioning and config-management workflows. ***Centralized visibility, automation, and auditability across the full Windows fleet***
- **Configuration Drift Detection (Python, PowerShell, WinRM, Ansible, Windows):** Extended the configuration-drift workflow withing the Hosted Environment Navigator by implementing a Celery-based fan-out/fan-in approach to run checks across 13 servers and 144+ config files every 15 minutes, including handling multiple shared and dedicated customers. ***Eliminated manual config audits and gave instant cross-server visibility***
- **Synthetic Testing at Scale (Azure DevOps, C#, Playwright, Azure Key Vault):** Built automated post-maintenance sanity tests for 169+ customer applications, running every 5–10 minutes to validate application health and database connectivity and report failures. Built a self-service customer onboarding pipeline that ***automatically generated customer-specific YAML configurations and testing workflows***, eliminating manually creating pipelines for new customers

Epilogue Systems | *DevOps Engineer* **Sep 2025 - Mar 2026**

- **Kubernetes Orchestration (EKS, Docker, NGINX Ingress, AWS ALB, HPA):** Containerized workloads needed to scale reliably without downtime; optimized Docker images (35% smaller) and rolling deployments. ***Achieved zero-downtime releases and 40% improved scaling***
- **Log Pipelines & ML Ops (Apache Airflow, S3, PostgreSQL, Grafana):** Processed millions of daily multi-service logs through Graylog, filtering and categorizing messages by severity, including critical, error, warning, and informational events. Built ETL pipelines and used Isolation Forest for anomaly detection to identify abnormal log patterns, storing results in S3/PostgreSQL and visualizing findings through Grafana dashboards. ***Reduced production downtime by 45%***
- **Cloud Cost Optimization (AWS CloudWatch):** Redundant log ingestion and unused metrics were inflating cloud costs; audited and eliminated the waste. ***Reduced monthly AWS spend from $7000 to $4500 (35% savings)***

Techavidity | *Software Engineer Intern* **May 2025 - Aug 2025**

- **CI & Testing Automation:** Deployments were slow with limited built-in checks; established automated testing and CI workflows with security checks and quality gates. ***Reduced deployment time by 40%***
- **Healthcare Data & GraphRAG (Neo4j, BigQuery, HuggingFace):** Patient referral processing was slow and AI retrieval costly; applied Neo4j GDS algorithms to BigQuery healthcare data and prototyped a GraphRAG solution. ***Cut referral time 25%, improved data quality 40%, lowered AI workflow costs 30%, sped retrieval 20%***

Intellint Technology LLP | *Full Stack Developer* **Apr 2022 - Apr 2023**

- **Shipment Portal & CI/CD (React, Node.js, PostgreSQL, Docker, AWS):** Shipment tracking for 50+ daily users was manual and CI/CD was unreliable; built a portal and automated Docker-based CI/CD on AWS. ***Cut manual work 30% and deployment failures 25%***

PROJECTS

- **Event Organizer GitOps (ArgoCD, Terraform, EKS, RDS):** 10+ automated deployments/day with self-healing sync on private-subnet AWS infra, 99.9% uptime.
- **AI Portfolio (GitHub Actions, Docker, Fly.io, NGINX):** Automated Docker builds, release tagging, reverse-proxy deployment pipeline.

EDUCATION

Drexel University - M.S., Software Engineering Philadelphia, PA | Sep 2023 - Mar 2025
Sona College of Technology - B.Tech, Information Technology Salem, India | Sep 2018 - Jun 2022

TECHNICAL SKILLS

Cloud & Containers: AWS (EKS, EC2, S3, RDS, IAM, VPC, CloudWatch), Azure, GCP, Docker, Kubernetes, NGINX Ingress

CI/CD & IaC: Azure DevOps, GitHub Actions, Jenkins, ArgoCD, Playwright, Terraform, Ansible, ManageIQ, VMware

Security & Monitoring: Azure Key Vault, Secrets Management, IAM, Trivy, VPC, Prometheus, Grafana, Splunk

Languages & Practices: Python (Flask, Celery), Bash, PowerShell, C#, SQL, YAML, PostgreSQL, Redis, WinRM; Linux, Windows Server; Agile/Scrum, Jira
